The overall installed capacity reaches 2556MW, and the estimated annual power generation after completion is 4.5 billion kilowatt hours,

Laos' capacity for solar power is expected to range from 10,000 MW to 15,000 MW, while wind power potential is estimated at about 100,000 MW, according to the report.

Data and information about power plants in Laos plotted on an interactive map.

Hydropower currently accounts for about 70% of total electricity generation output in Laos, and the country has about 10 onshore wind power projects with a total design capacity of 3.6 GW in the

In 2023, five power-generating plants were completed and entered into operation in Laos, including a hydropower plant with an installed capacity of 15 MW and four solar energy

Its network includes 84 power stations with a total installed capacity of 9,114.5 megavolt-amperes, supported by thousands of kilometers of high-voltage transmission lines

This pioneering project is set to transform industrial energy use by replacing polluting diesel generators with a large-scale battery storage system powered by solar energy.

According to data from the Ministry of Energy and Mines of Laos, the country currently has 94 power plants, including 81 hydroelectric ones, with a total installed capacity of more

As of 2020, Laos had 10,021 MW of electricity generation capacity, 80% of which came from hydropower. 75% of the electricity generated in Laos is exported, which has earned the country the
