An important note: If the Rayleigh formula were accurate (which it is), then the color of visible light most scattered wouldn't be blue, but rather violet, which is of a shorter wavelength. We

Blue light is scattered more than red light, so during the day when we look at parts of the sky that are away from the sun, we see more blue than red. During sunset or sunrise, most of the

The blue color of light of the sky is due to Rayleigh scattering. But the sun itself appears yellow in color whereas the scattered sunlight itself appears blue. Why does this happen?

Find the latest Tesla, Inc. (TSLA) stock quote, history, news and other vital information to help you with your stock trading and investing.

During day, it scatters violet and blue colors leaving yellowish sunlight (the reason why sky is blue and sunlight is yellow). During morning and evening, the sun appears reddish
